PROFESSIONAL SUMMARY

Computer Science student specializing in Cyber Security and Forensics. Experienced in penetration testing, vulnerability assessment, and building secure web applications. Proven track record in conducting research on AI-driven security threats and implementing robust defensive strategies in software development.

EDUCATION

Year	Degree/Exam	Institute	CGPA/Board
2022 – 2026	B.Tech in CSE (Cyber Security and Forensics)	MIT World Peace University, Pune	7.42/10

TECHNICAL SKILLS

- Languages:** Python, JavaScript, C/C++, SQL, Bash, PHP
- Security Tools:** Burp Suite, Nmap, Metasploit, Nessus, Wireshark, OWASP ZAP, Hashcat
- Development :** Git, VS Code, MySQL, AWS
- Operating Systems:** Kali Linux, Ubuntu (Linux), Windows
- Soft Skills:** Technical Report Writing, Analytical Thinking, Team Collaboration

EXPERIENCE & RESEARCH

DelPat LLP Jun '25 - Dec '25
Full Stack Developer Intern Remote

- Collaborated with cross-functional teams to translate business needs into secure technical implementations.
- Engineered production-ready web platforms with role-based access controls, encrypted data transmission, and audit logging to ensure compliance and data integrity.

HackMIT 2025 – Capture The Flag (CTF) Apr '25
Finalist – Cyber Security Challenge Pune, India

- Solved 15+ challenges across reverse engineering, web exploitation, and digital forensics.
- Exploited vulnerabilities including SQL injection, XSS, and authentication bypass using Burp Suite and custom scripts.

Research Publication – ICTBIG 2024 (IEEE Xplore) Nov '24 - Mar '25
Researcher DOI: 10.1109/ICTBIG57409.2024.10911062

- Authored "Real-Time Detection of AI-Generated Deepfake Audio: A Novel Approach."
- Researched vulnerabilities in voice-based authentication systems and proposed an ML-based detection framework trained on large-scale audio datasets, achieving real-time classification of AI-generated speech.

PROJECTS

CloudMigrate – Multi-Cloud Data Orchestration Platform Next.js, Python, AWS S3, GCP, Supabase
Production-grade cloud migration and integrity verification platform

- Developed a secure Python-based transfer engine for AWS S3 to Google Cloud Storage migration with parallel processing and integrity verification using MD5 and SHA-256 hashing.
- Implemented cloud infrastructure setup with least-privilege IAM policies, secure credential management, and automated migration workflows using AWS CLI and GCP SDK.

ATMS – Enterprise Asset Management System RBAC, MongoDB, React
System for tracking organizational assets and lifecycle management

- Architected a Role-Based Access Control (RBAC) module to secure sensitive data and ensure authorized access.
- Automated asset lifecycle workflows to ensure audit compliance and data integrity.

ResumeAI – Engagement Platform MERN Stack, Security Validation
Automated document generation platform

- Implemented real-time input validation and sanitization to prevent injection attacks.
- Reduced document creation time by 90% while maintaining secure session management.

CERTIFICATIONS

- Cyber Security Pre-Graduation Program (2023):** Training in ethical hacking, Kali Linux, and vulnerability assessment.
- Blockchain Evolution (NIT Goa - GIAN 2025):** Focused on smart contract vulnerabilities and decentralized security.
- Goldman Sachs Engineering Experience (2024):** Simulation focused on secure API development and system design.
